Handcrafted Solutions For A High-Tech World

o-CL HABI
FP 5380

General

o-CL HABI is a low cost, highly efficient UV curing agent used to initiate the photopolymerization of prepolymers in combination with mono or multifunctional acrylate monomers.

o-CL HABI is widely used for direct write laser imaging as well as a standard photoinitiator when coupled with a strong electron donor such as NPG. Because of its relative high molecular weight o-CL HABI is practically non-migratable in cured UV coatings.

Chemical structure

Hampford Research, Inc. disclaims any liability incurred in connection with the use of the data contained in this bulletin. Furthermore, nothing contained in this bulletin shall be construed as a recommendation to use any product in conflict with existing patents.

Product information

PRODUCT TYPE:	Free radical photoinitiator
TRADE NAMES:	o-CI-HABI, BCIM, BCTB
CAS NUMBER:	7189-82-4
APPLICATIONS:	Photoresists, Graphic Arts Imaging
KEY FEATURES:	Free radical generation that can either initiate polymerization or oxidize leuco dyes.
REGISTRATIONS:	TSCA, DSL, EINECS, MITI
SHELF LIFE:	1 year when stored indoors at 25 (+/- 5) deg C

Typical specifications

APPEARANCE:	Free flowing, yellow powder
PURITY:	99% Minimum
% MONOMER:	1% Maximum
MELTING POINT:	200 deg C
% VOLATILES	0.20% Maximum

Absorption Spectrum

Hampford Research, Inc. disclaims any liability incurred in connection with the use of the data contained in this bulletin. Furthermore, nothing contained in this bulletin shall be construed as a recommendation to use any product in conflict with existing patents.

Safety and Handling

o-CL HABI should be handled in accordance with good industrial practice. Detailed information is provided in the SDS.

o-CL HABI is sensitive to visible light and any exposure to sunlight should be avoided.

NOTE: Intellectual property issues cover the use of this material in select applications.
